WE TRANSFORMED GALTIER!

From video projects on iPads to interactive art displays at a local coffee shop, our students are experiencing the future of education, today.

Through Personalized Learning, students are challenged to show they understand what they've learned through iPads, cooperative learning, acting, drawing, presentations and more. Whether they are excelling or need extra help, our youngest students can be grouped by skill level, rather than grade level – offering a unique classroom environment for collaboration.

Traditional classrooms are replaced with bright and open "Learning Studios" and the media center expands into an "Exploratorium" with a hands-on approach to technology and creativity. This unique school environment helps shape the personalized approach to teaching and learning.

RENOVATION

- Classrooms turned "Learning Studios" allow different grade levels to interact with each other as teams
- "Breakout Rooms" for small group collaboration
- The media center continues as the "Exploratorium," with a hands-on approach to creativity, technology and research.
- Flexible learning spaces for teamwork and small groups
- Multi-purpose rooms that shape and create learning

EDUCATION

- Students can be grouped by skill level rather than grade level
- Personalized Learning through technology will help inspire individual creativity
- Engaged learning through iPads and more
- Students and teachers can learn and teach through collaboration across grade levels
- Teachers can present lessons in different ways so all students can understand (iPad apps, videos, etc.)
- Students will guide their own educational experience while being challenged to show they understand challenging concepts
